#### ***Allowable Subject Matter***

2. Claims 1, 3, 4, 6, 8, 10-13, 15 and 18 are allowed.

The present invention is directed to an information processing apparatus adapted to execute a sequence of processing operations for recording video data recorded to a first recording medium in a first format to a second recording medium in a second format, without user's manual intervention. The independent **claims 1, 13, 15 and 18**

identify uniquely distinct features "associating at least one track control attribute in the EDL element with at least one subsequent EDL element in the second media track, the track control attribute changing a duration of a media item in the first media track referenced by the EDL element in the second media track, wherein the track control attribute includes an attribute that serves to change commencement and termination of the media item in the first media track referenced by the EDL element in the second media track". The closest prior art U.S. Patent Pub. 2003/0002851 A1 Hsiao et al, U.S. Patent 6,970,639 B1 to McGrath et al. and U.S. Patent 6,957,008 B1 to Yasui, disclose editing apparatuses that edit media data, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.
